FOREWORD

Projected Defense Purchases: Detail by Industry and State is issued by the Office of the Secretary of Defense (OSD). The estimates presented in the report are produced by the Economic and Manpower Analysis Division of OSD's Office of Program Analysis and Evaluation.

The report provides projections of direct and indirect (or defense-related) purchases from 50 major manufacturing industries. Estimates of defense-related employment and direct and indirect defense spending in each of the 50 states and the District of Columbia also are presented. An introduction gives a brief overview of the definitions, budgetary concepts, and expenditure categories used in developing the estimates, and offers some guidelines for interpreting them. The tabular material is divided into three sections:

Section I: Summary Tables – Industry Expenditures and Employment,
Individual States and Entire United States

Section II: Projections for Selected Industries

Section III: Individual State Projections

Descriptions of table formats accompany the projections.

Additional copies of this report may be obtained on the PA&E public access web-site home page, <http://www.ra.pae.osd.mil/depps>. A feedback form for comments is attached at the end of the report.

DETAIL BY INDUSTRY AND STATE
Calendar Years 2000 Through 2005**

July 2000

Reader's Note

Since the 1996 edition of *Projected Defense Purchases: Detail by Industry and State*, the Defense Employment and Purchases Projection System (*DEPPS*) has consisted of three defense-spending models:

- *IDEPPS*, a detailed interindustry model, which forecasts defense demands by 320 industries, broken out by major appropriation and procurement category.
- *RDEPPS*, a state-level (regional) model, which determines the effect of defense expenditures by major procurement category on each state, at an aggregate level of 97 industries (unlike the more detailed *IDEPPS*).
- *LDEPPS*, a skilled labor model, which summarizes the requirements generated for various occupational classifications of employment in each industry. The occupational matrix used in *LDEPPS* comprises 100 occupational categories, chosen in a way that permits more detail to be provided on categories that are heavily employed either directly or indirectly by the Department of Defense.

Two input-output models feed *DEPPS*:

- *LIFT*, which stands for Long-term Interindustry Forecasting Tool, is a 97-sector input-output model embedded in a macroeconomic model. *LIFT* establishes the macroeconomic environment as well as industry controls.
- *Iliad*, or the Interindustry Long-run Integrated and Dynamic model, uses the macroeconomic forecasts and the industry controls from *LIFT* to further divide the economy into 320 industries.

The Office of Program Analysis and Evaluation and Interindustry Forecasting at the University of Maryland (INFORUM) developed *DEPPS*. *LIFT* and *Iliad* were developed by INFORUM. *DEPPS*, *LIFT*, and *Iliad* are maintained by INFORUM.

The last and most critical element in developing the projections is the *Defense Translator*. The *Defense Translator* disaggregates the total defense budget by budget category and is updated annually.

APPENDIX: Mapping From Industries to Industrial Sectors, with SIC Codes.....	143

This page intentionally blank

INTRODUCTION AND HIGHLIGHTS

This report presents estimates of defense purchases during calendar years 2000 – 2005 from 50 Standard Industrial Classification (SIC) industries that are major defense suppliers. The report also provides projections of defense-related employment and spending during the forecast years for each of the 50 states and the District of Columbia. The estimates are based on the President's budget submission of February 2000, and on the geographic distribution of the major components of defense spending in the recent past. This document is also available on the DEPPS web-site.¹ Supporting documentation, such as a more complete description of the model and data used to generate the estimates, will be posted there as well.²

The figures reported here are *projections*; they do not necessarily reflect what actual defense expenditures will be in various industries or states in future years. Purchases from particular industries will depend upon the size and composition of the defense budget enacted by the Congress. The location of purchases will be determined not only by the level of defense spending, but also by the location of industries and by competition among firms within industries, both for prime contracts and for subcontracts.³ The projections therefore serve as benchmarks; they describe the future pattern of defense and defense-related expenditures, *assuming that each state's shares of the various components of defense activity remain as they have been in the recent past.*

The framework for the projections was redesigned in 1996, and the definitions of industries for which projections are reported also were revised. Consequently, comparisons of post-1996 projections with projections from prior years are inappropriate. The post-1996 framework is called the Defense Employment and Purchases Projection System (*DEPPS*). *DEPPS* consists of three defense-spending models:

- *IDEPPS*, a detailed interindustry model, which forecasts defense demands by 320 industries, broken out by major appropriation and procurement category.
- *RDEPPS*, a state-level (regional) model, which determines the effect of defense expenditures by major procurement category on each state, at an aggregate level of 97 industries (unlike the more detailed *IDEPPS*).
- *LDEPPS*, a skilled labor model, which summarizes the requirements generated for various occupational classifications of employment in each industry.

Two input-output models feed *DEPPS*. The first model, called the Long-term Interindustry Forecasting Tool (*LIFT*), is a 97-sector input-output model embedded in a macroeconomic model. *LIFT* establishes the macroeconomic environment as well as industry

¹ Available at <http://www.ra.pae.osd.mil/depps>.

² Updated documentation is expected to be available on the web-site by October 2000.

³ The Directorate of Information Operations and Reports in the Washington Headquarters Services publishes comprehensive data on prime contract awards and personnel expenditures, by state, in the *Atlas/State Data Abstract for the United States*. The edition covering fiscal year 1999 is available from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

controls. The second input-output model, called *Iliad* for Interindustry Long-run Integrated and Dynamic model, uses the macroeconomic forecasts and the industry controls from *LIFT* to further divide the economy into 320 industries.⁴

Definitions and Coverage

The estimates presented in this report consider both “direct” and “indirect” defense expenditures. Direct defense expenditures are those that the Department of Defense (DoD) itself makes. These include purchases of goods and services, as well as military and civilian pay.

Indirect (or defense-related) expenditures, by contrast, represent purchases—generated throughout the economy—of items used to produce goods bought by DoD. That is, indirect expenditures reflect the costs of materials, tools, and parts that prime contractors buy from suppliers in order to perform work for which DoD has contracted. Those sales, in turn, trigger subsequent rounds of transactions, as subcontractors purchase goods and services from their major suppliers and those firms place orders with companies at lower tiers of the production chain. The term “indirect defense purchases” applies to this sequence of purchases—goods and services from subcontractors and lower-tier suppliers.

“Indirect defense purchases resulting from direct pay,” shown in the state-level tables in Section III, refers to the production of goods and services used by DoD’s civilian and military employees. Estimates for these expenditures are included in the statewide tables because the concept has been of interest to planning agencies and others concerned with local economic development. Indirect defense purchases resulting from direct pay are *not* included in the industry estimates reported in Section II.

The employment estimates include DoD civilian employment as well as employment resulting from both direct and indirect DoD purchases of goods and services. Employment generated by indirect purchases resulting from direct pay (i.e., by personal consumption expenditures) is *not* included in the estimates presented here.

Budget Concept Employed. The *DEPPS* projections are expressed in terms of outlays. Outlays represent disbursements of funds made during the course of a year. In contrast, budget authority is the amount of money that Congress authorizes DoD to obligate in any given year. Budget authority differs from outlays in that contractual obligations (which must be within the limits set by budget authority) often call for payments to be spread over a period of years, as the work is completed.⁵ (Budget authority for research, development, and procurement projects, in particular, tends to be disbursed over a period of several years.) Therefore, during periods of budget growth, budget authority tends to exceed outlays in any given year.

Coverage. The federal budget is divided into a number of sections called “functional categories,” each containing programs serving a common purpose. National security-related programs are grouped into Functional Category 050 (National Defense). This category includes

⁴ The Office of Program Analysis and Evaluation and Interindustry Forecasting at the University of Maryland (INFORUM) developed *DEPPS*. *LIFT* and *Iliad* were developed by INFORUM. *DEPPS*, *LIFT*, and *Iliad* are maintained by INFORUM.

⁵ One metaphor is that of a checking account: budget authority represents the amount of money placed in a given account. Outlays represent “checks” that draw on those funds, which may be written over a number of years.

all of the Defense Department's military programs and the national security programs administered by other federal departments, such as the Department of Energy. It *excludes* nonmilitary programs managed by the Department of Defense (for example, highway bridge inspection projects conducted by the Army Corps of Engineers).

The *DEPPS* projections are based on a narrower budget grouping, Functional Category 051 (Department of Defense, Military). This subset of 050 funds *includes* all of the Defense Department's military programs, but *excludes* the national security programs administered by other agencies and DoD programs serving civil functions (principally public works projects of the U.S. Army Corps of Engineers). Disbursements of military retirement pay are also included in the *DEPPS* projections.

The defense budget (defined here to include only those programs falling within Functional Category 051) is partitioned into five major accounts: military personnel; operations and maintenance (O&M); procurement; research, development, test, and evaluation (RDT&E); and military construction. The titles of these accounts are reasonably descriptive of the types of expenses they cover:

- The *military personnel* account covers the pay of active-duty service members and reservists, as well as some other personnel-related expenses such as permanent change-of-station (PCS) travel and purchases of military uniforms. Also included in this account is DoD's share of the government's annual payments into the Military Retirement Fund (see below).
- The *O&M* account funds the day-to-day operations of the defense establishment. Money from this account goes to purchase fuel and other consumable items and to pay all but a small share of DoD's civilian work force.
- The *procurement* account covers purchases of weapons, equipment, and other military capital goods.
- The *RDT&E* account pays for the development and testing of new military systems and for other research activities and associated civilian pay.
- The *military construction* account covers the cost of constructing military facilities and of providing housing for military personnel and their dependents.

The *RDEPPS* projections include disbursements of military retirement pay from the Military Retirement Fund (Functional Category 602 in the *Budget of the United States Government*). This trust fund receives payments from the military personnel account of the defense budget (i.e., from Functional Category 051) as well as from the general fund in the federal budget; the balance in the Military Retirement Fund is invested in U.S. government securities and earns interest. Annual disbursements from the Military Retirement Fund are currently larger than DoD's annual payments into it. Much like the Social Security Trust Fund, the military retirement account uses current payments to fund current retirees.

The *DEPPS* projections include all outlays from the DoD military personnel account *except* payments *into* the Military Retirement Fund. Military pay and annuity payments to

military retirees have different geographical patterns; accordingly, the projections use two different, historically based distribution rules—one for military pay and one for retirement pay. Because the *RDEPPS* projections include disbursements of retirement pay, the summation across states of direct defense purchases exceed outlays from Category 051 by approximately \$20 billion.

Highlights of the Projections

The composition of projected defense purchases is quite different from the composition of all other purchases in the U.S. economy. Figure 1 presents information on the composition of projected defense and nondefense final purchases in 2001. A large proportion of defense purchases—49 percent—are made from manufacturing industries. By contrast, only about 31 percent of nondefense final purchases are made from the manufacturing sector of the economy. Similarly, services make up about 45 percent of defense final purchases but about 64 percent of nondefense final purchases. Compared to last year's results, the 2001 projections depict a 3 percent shift toward defense purchases of services. This change is driven by lower aircraft demand (industry 235) and by increased demand from research laboratories and management consulting (industry 290).

Figure 2 presents information on the composition of estimated defense and nondefense indirect purchases—the sales of tools, materials, and supplies used as intermediate goods in the production process. The manufacturing intensity of defense purchases is reflected in indirect defense purchases as well, although indirect defense purchases more closely resemble their nondefense counterparts. Manufacturing accounts for about 38 percent of projected defense indirect purchases and for about 36 percent of projected nondefense indirect purchases. Services make up about 56 percent of defense indirect purchases but about 54 percent of nondefense indirect purchases. Unlike direct defense purchases, the projections for indirect defense purchases are comparable to last year's results.

This report lists the 50 non-food manufacturing industries with the largest (direct plus indirect) projected defense production. While some of these industries are defense-specific (e.g., armaments, shipbuilding, tanks and tank components, aircraft, and guided missiles), a significant share of defense purchases are made directly or indirectly from industries less obviously oriented toward defense activities (e.g., electronics, blast furnaces and steel mills, motor vehicle parts, industrial controls, telephone and telegraph equipment, and apparel).

Defense-Related Employment. Defense-related civilian employment (including the civilian employees of the Department of Defense) represents about 2 percent of projected total U.S. civilian employment in 2001. The composition of defense-related civilian employment (in 2001) differs somewhat from that of nondefense employment. The differences reflect the manufacturing intensity of defense purchases, as well as specific employment patterns of the individual industries from which defense purchases are made.

Occupations primarily associated with manufacturing industries (e.g., precision production, craft, and repair) account for a large share of defense-related employment (18 percent), while service and agriculture workers account for a large proportion (22 percent) of nondefense employment (see Figure 3). Engineering workers also account for a larger share of defense-related employment (6 percent) than they do of nondefense employment (1 percent).

More detailed tabulations of defense-related employment (including a breakout of engineering and scientific personnel by specialty) are provided in Section I.

Defense Expenditures by State. Table 1 presents estimates of direct, indirect, and total (direct plus indirect) per capita defense expenditures in 2001 for each of the nine U.S. census divisions and for the United States as a whole. For each region and expenditure category, the table provides both estimates for the census region and a range of estimates corresponding to the upper and lower bounds of the estimates for the individual states within the region.

The geographic distribution of defense expenditures reflects the distribution of military personnel and DoD civilian employees, as well as the location of the industries that make defense goods. While New England, for example, ranks seventh among the nine regions in defense pay per capita, it ranks first in the level of projected defense purchases and third in projected total direct expenditures.

The dispersion *within* regions is larger than the dispersion across them. For example:

- Seven of the nine regions contain one or more states in which total projected defense expenditures (direct and indirect) exceed the national average.
- Eight regions contain at least one state in which total projected defense expenditures are less than 60 percent of the national average, and at least one state in which total projected expenditures are greater than 90 percent of the national average.
- Intraregional variation (the difference between the lowest and highest state estimate within a region) are greater than the variation among regional averages (the difference between the lowest and highest regional estimate) in three of the nine regions.

The *DEPPS* projections describe the pattern of defense and defense-related expenditures, assuming that the geographic distribution of the various components of defense activity remains stable relative to recent years. Should this assumption fail, the actual course of completion of defense contracts would produce a future geographic pattern that differs from historical distributions.

Limitations of the Projections

The projections of defense purchases presented in Section II show direct and indirect purchases from various SIC industries. They are intended to include all defense purchases, even goods and services produced in other countries.

By contrast, the state-level projections in Section III include only purchases and pay in the 50 states and the District of Columbia. They exclude expenditures made abroad or in U.S. territories outside the 50 states, the pay of military personnel stationed on ships in foreign waters, and expenditures for imported goods. In order to factor out such expenditures, historical data showing the distribution of military personnel are used and an assumption is made about the level of defense imports. Specifically, it is assumed that for the products of any given industry, imports constitute the same share of defense purchases as they do of civilian purchases. But

because the Defense Department is required to channel most of its purchases to domestic firms, and because defense purchases often represent specialized products, the percentage of defense purchases accounted for by imports may be lower than this assumption suggests. To the extent that this is the case, the projections will underestimate defense expenditures in the United States.

Comparisons with Previous Estimates

As noted above, the framework for the projections was redesigned in 1996, and the definitions of industries for which projections are reported have changed. This precludes reliable comparisons between pre- and post-1996 projections. Three additional factors influence the reliability of comparisons between the current estimates and other post-1996 projections: (1) internal changes in the *DEPPS* model; (2) differences between defense budgets resulting from changes in the Future Year Defense Program (FYDP); and (3) economic assumptions.

The internal structure of *DEPPS* is revised occasionally. Such was the case for this report, when *LIFT* was changed to a 1987 base year input-output table, and the number of sectors increased from 85 to 97.⁶ Structural changes such as this make it extremely difficult to compare projections over time. Most internal model changes, however, reflect revisions in data sets rather than changes in a model's fundamental architecture. For example, this year the occupational matrix used in *LDEPPS* (the skilled labor model) has been updated with the Bureau of Labor and Statistics (BLS) 1998 – 2008 projections. In addition, industry-level employment data used in *LIFT* have been updated through 1998. These types of changes do not preclude comparisons because the essential framework of the model remains unchanged.

Changes in the defense budget overall also influence cross-year comparisons. Each year's projections are made using the defense portion of the President's budget submission to Congress. The defense budget is developed each year through an involved process and can change significantly from year to year. Consequently, the projections also change. For example, the current projections are based on a defense budget that is 5 percent higher than the 2000 budget.

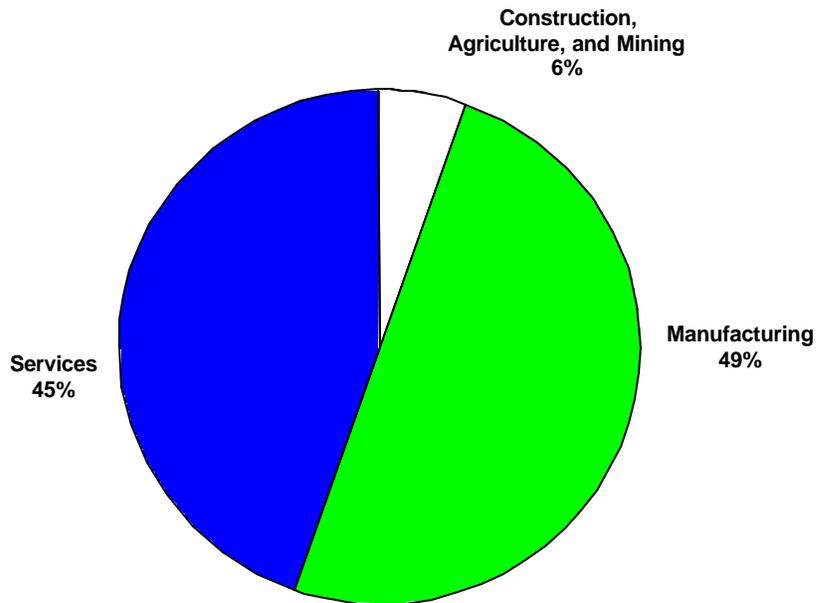

Finally, variability in the projections, and assumptions about the behavior of the economy as a whole and of specific sectors within the economy, also affect *DEPPS* outcomes. Many basic economic assumptions have been revised over the past year, in part due to the continued strong growth of the U.S. economy. The revised assumptions imply higher average productivity growth than was implicit in last year's projections. Other economic changes include higher global oil prices and higher interest rates. These changes affect the 2001 projections.

As this discussion illustrates, there are many reasons why estimates shift from year to year. Structural changes in the *DEPPS* model greatly complicate comparisons with other years' projections. The other possible sources of change—*DEPPS* data revisions, the defense budget, and broader economic assumptions—do not preclude comparisons, but isolating the effects of any single factor is a challenge. Ultimately, while comparisons between estimates are possible, they should be made taking the underlying reasons for the changes into account.

⁶ The baseline previously had been 1982 but was changed to 1987 to be consistent with the *Iliad* model.

SECTION I: SUMMARY TABLES – Industry Expenditures and Employment, Individual States and Entire United States

The summary tables provide an overview of estimated defense expenditures and employment. Table 3 presents estimates of total defense purchases from the 50 non-food/tobacco manufacturing industries leading in defense production in 2001. The estimates shown include both direct and indirect purchases. Table 4 presents estimates of defense-related employment by major occupational category, while Table 5 provides more detailed estimates of defense-related employment of engineers and scientists.

The remaining five tables present state-level information:

- The first three tables present estimates of *direct* defense expenditures, first in the aggregate and then by selected budget accounts. Table 6 shows outlays (for purchases and pay) projected to be made in each state during each year of the forecast period. (The estimates assume state shares of the underlying components of pay and purchases remain at recent levels.) The next two tables break out the statewide estimates by budget category. Table 7 shows outlays arising from the procurement and RDT&E accounts, while Table 8 displays outlays resulting from the remaining accounts.
- The last two tables present estimates of *indirect* defense expenditures. Table 9 shows indirect expenditures arising from purchases made by the Department of Defense; Table 10 shows indirect expenditures deriving from the wages and salaries of DoD personnel and from military retirement pay.

SECTION II: PROJECTIONS FOR SELECTED INDUSTRIES (IDEPPS)

The tables in this section show projected defense and defense-related purchases from the 50 manufacturing industries projected to lead in defense production in calendar year 2001. A separate table is provided for each industry.

The upper portion of each table provides projections of direct and indirect defense purchases for calendar years 2000 to 2005. The lower portion shows the indirect defense purchases estimated to result from DoD purchases from each of eleven industrial groupings.

Although *IDEPPS*, the detailed interindustry model, forecasts defense demands by 320 industries, only 50 are presented in this section. These industries are grouped into 97 sectors in the state-level tables presented in Section III. Thus, industrial sector 51, "Aerospace," appearing in the state-level tables, includes four industries: industry 235, "Aircraft"; industry 236, "Aircraft and Missile Engines, Propulsion Units and Parts"; industry 237, "Aircraft and Missile Parts and Auxiliary Equipment, n.e.c."; and industry 21, "Guided Missiles and Space Vehicles." A crosswalk between the industries cited in Section II and the industrial sectors addressed in Section III is provided in the appendix. (The appendix also contains a crosswalk to four-digit Standard Industrial Classification (SIC) codes.)

In addition, tables showing sources of defense purchases are provided for the 10 industries leading in defense production in 2001.

SECTION III: INDIVIDUAL STATE PROJECTIONS (RDEPPS)

The tables in this section give state-level estimates of defense and defense-related expenditures in calendar years 2000 through 2005. A separate table is provided for each of the 50 states and the District of Columbia; an additional table is provided for the United States as a whole. The tables are divided into two sections. The first section of each table presents estimates of direct defense purchases and pay and of indirect defense purchases for each year of the projection period. (For purposes of comparison, projections of nondefense expenditures and of total output—total economic activity—also are provided.) The second section provides estimates of the dollar value of direct and indirect purchases from the five industrial sectors projected to lead in defense sales in the state, and the five projected to lead in indirect sales stemming from DoD purchases, over the forecast period.

The industrial *sectors* represented in the tables are aggregates of the *industries* covered in Section II. Industrial projections are made for 320 industries. For purposes of the state-level reports, these are grouped into 97 industrial sectors. Thus, industrial sector 51, “Aerospace,” used in the state tables, includes four industries: industry 235, “Aircraft”; industry 236, “Aircraft and Missile Engines, Propulsion Units and Parts”; industry 237, “Aircraft and Missile Parts and Auxiliary Equipment, n.e.c.”; and industry 21, “Guided Missiles and Space Vehicles.”

Relationship of the *RDEPPS* State Level Projections to the *IDEPPS* National Projections.

IDEPPS’ treatment of defense expenditures differs from that of *RDEPPS* in several important ways, due to differences in the conceptual rationale for each module. *IDEPPS* is designed to investigate economy-wide effects of the defense budget, by simultaneously determining domestic production, imports, and indirect purchases by industry. *RDEPPS* is designed to investigate domestic effects of expenditures by state, including military retirement disbursements. Therefore, *RDEPPS* includes *only* that part of active duty and retirement pay spent domestically, making an explicit adjustment for pay that is sent abroad. Retirement pay is treated on a disbursement basis in *RDEPPS*, as opposed to an accrual basis in *IDEPPS*. The *RDEPPS* measure of total direct defense expenditures is made smaller by the removal of pay sent abroad, but is made larger by the fact that retirement disbursements currently exceed accruals. The net effect is that *RDEPPS* projections of total direct spending are *larger* than the comparable *IDEPPS* projections.

FEEDBACK FORM

1. Did this publication provide the information you needed to interpret the projections in which you were interested? If not, what other information did you need?

2. Did the projections for your industry or state seem to be reasonable?

3. Are there other published forecasts with which the projections for your industry or state can be compared?

4. What parts of the projections were most and least useful to you?

MOST		LEAST
_____	Projected direct defense purchases for an industry	_____
_____	Projected indirect defense purchases for an industry	_____
_____	Projected direct defense expenditures for a state	_____
_____	Projected indirect defense expenditures for a state	_____
_____	Projected geographic distribution of direct purchases	_____
_____	Projected geographic distribution of indirect purchases	_____
	Other: _____
